

I added a battery in 'My Components' but it isn't showing up as an option in the Inverter task.

When you add a battery component, you must ensure that you have set the compatibility with your custom inverter category or specific inverter:

1. Create battery component
2. Under battery rules select '**Selected inverter groups only**' or '**Selected specific inverters only**'
3. Click on the text to show the different inverters and select the check box under your relevant inverter group or inverter

The screenshot shows a configuration interface for inverter selection. On the left, under the heading "Rules:", there are three options: "Exclude from shopping cart" (unchecked), "Selected inverter groups only" (checked and highlighted with a yellow box), and "Selected specific inverters only" (unchecked). On the right, under the heading "Hybrid Inverters:", there is a list of inverter brands with checkboxes: SolaX, GivEnergy, Huawei, MyEnergi Libbi, Sungrow, and Growatt LV.

If this does not resolve the issue or now too many the options are showing in red, you will need to look at the **max battery capacity** value in the **Battery** section of the hybrid inverter and compare this with the **battery capacity** of your custom battery.
