

Why are there two consumption figures to choose from in the financial task?

If you have completed both the MCS self-consumption calculation and the Easy PV consumption calculation in the project, both figures will appear as options when you open the [Financial task](#) in Easy PV.

The MCS method is calculated end of the [Performance task](#) for easy-pv.co.uk and the Easy PV method is calculated in the [Consumption task](#). Both are acceptable methods for calculating the self-consumption, you are free to choose either calculation. You can read more about the differences [here](#).
