

Speedy PV V2.

Enabling the tool in Pro Account Settings

To configure Speedy PV, navigate to **Pro Account Settings** and go to the **Speedy PV Beta** tab. Then enable the Speedy PV configuration dashboard. If you would like to try out the new version please enable 'New Speedy PV using kit combinations'

The screenshot displays the 'Pro Account Settings' interface. On the left is a sidebar menu with options: Home, New Project, My Projects, Leads, My Components, My Account, User Management, Team/Pro Management, Site Settings, Speedy PV Beta, Marketplace Beta, and Pro Account Settings (highlighted). The main content area is titled 'Team Preferences' and features a horizontal tab bar with the following tabs: General, Financial, Documents, Customer Proposal, Email, Design, Performance, CRM Connections, Speedy PV Beta (active), and Marketplace Beta. Under the 'Speedy PV Beta' tab, there is a section titled 'Speedy PV Beta' with a description: 'Speedy PV is a tool that can be embedded in your website to allow your customers to get an immediate indication of the suitability of their property for solar, and an indicative price. Leads generated by the tool are imported into Easy PV so that you can turn them into projects.' Below this, a note states: 'See the tool in action on our demo page. Once you are ready to try it out, simply turn on the toggle to access the configuration dashboard!'. There are two toggle switches: 'Enable the Speedy PV configuration dashboard' (which is turned on) and 'New Speedy PV using kit combinations' (which is turned off). A detailed note explains the new tool: 'The new Speedy PV runs on a web address of its own and as a widget inside your website. quotes the kit combinations you tag for it. and can place panels on a roof as the homeowner draws it. Switch it on to set it up; your existing embed keeps working and loads the new widget once you go live. Switch it off to go back to the legacy tool, exactly as it was.'

Setting up website domain

You can choose to have it linked to a site managed by Speedy PV or you can run it on a website of your own (premium plan feature).

Your Speedy PV address

Your Speedy PV lives at its own address on `speedy-pv.co.uk`. Choose the name it appears under: lowercase letters, numbers and hyphens, up to 48 characters. Leave it empty to use your company name.

Name

midsummer-energy

Your address: `https://speedy-pv.co.uk/midsummer-energy/`

Your own domain

On the premium plan your Speedy PV runs on a web address of your own, such as `quote.yourcompany.co.uk`, instead of its Speedy PV address. We recommend a subdomain of a domain you already own: `quote.` or `solar.` followed by your website's domain. Enter the bare domain name, without `https://` or a path.

A custom domain is part of the premium plan

Premium is not enabled for your team yet; contact help@easy-pv.co.uk to ask about it. Your Speedy PV works on its Speedy PV address either way.

Domain

quote.yourcompany.co.uk

Contact details

On the contacts tab, put in the details for people to use when they need to contact you for more information. These will usually be your main office or sales phone number and email address.

Branding

On the branding tab, you can set the theme colour to use for the iconography colour scheme and any buttons in the tool.

You will also need to add your logo

Changes reach your Speedy PV within the hour

Your hosted site and widgets refresh their copy of these settings every hour, so changes here can take up to an hour to show up there. Resync to send your saved changes now.

Resync

Theme colour

Select a colour to customise the appearance of Speedy PV and to make sure it aligns with your brand. Choose a colour that isn't too dark - it's important that black text is clear against a background of this colour.

Colour

Logo *Required*

Your logo appears at the top of your Speedy PV site and widget and in the emails Speedy PV sends your customers. A PNG or SVG with a transparent background looks best, at least 400 pixels wide. Your logo on the Midsummer marketplace stays as it is: Midsummer looks after that one.

Emails

On the emails tab you can add an email signature that will appear at the bottom of the emails that are sent by the system.

You will need to configure SMTP email credentials for one of your email addresses so emails will be sent from that address instead of a no reply at EasyPV email address. **If you use Microsoft 365 or Gmail you can connect your email via the OAuth2.0 method.**

You can also add in other email addresses to copy in on the emails that are sent so that could be an email for your sales team or another generic mailbox.

Pricing settings

To use Speedy PV, you must set up automatic pricing rules, so the correct estimates can appear for your project. If automatic pricing is already set up then nothing needs to be changed here.

If automatic pricing is not already set up then you can follow these steps on our [guide](#).

Lead Capture

You can choose when to collect the customers details whether it is before or after they see estimates or you can hide pricing completely. These settings are part of the premium plan.

Speedy PV Setup

[Domains](#)[Contact](#)[Branding](#)[Emails](#)[Installation Area](#)[Pricing](#)[Roof Scanning](#)[Lead Capture](#)[Est](#)

? These settings are part of the premium plan

On your plan Speedy PV always shows prices with the estimates, and asks for contact details when the customer requests a quote. Choose the premium plan on the Billing tab to change that.

When customers see prices

Whenever prices are not on screen, nothing else about money is either: no payback, savings or bill figures.

☒ **With the estimates (default)**
Prices, payback and savings show with each system. The customer gives their contact details when they ask for a quote.

☐ **Once they give their contact details**
Prices are hidden until the customer gives their name and email. Every price then shows, and we save a lead for the system they were looking at and send you a short notice of it. If they ask for a quote, their details are already filled in, that lead is updated with the system they chose, and the lead emails go out as usual.

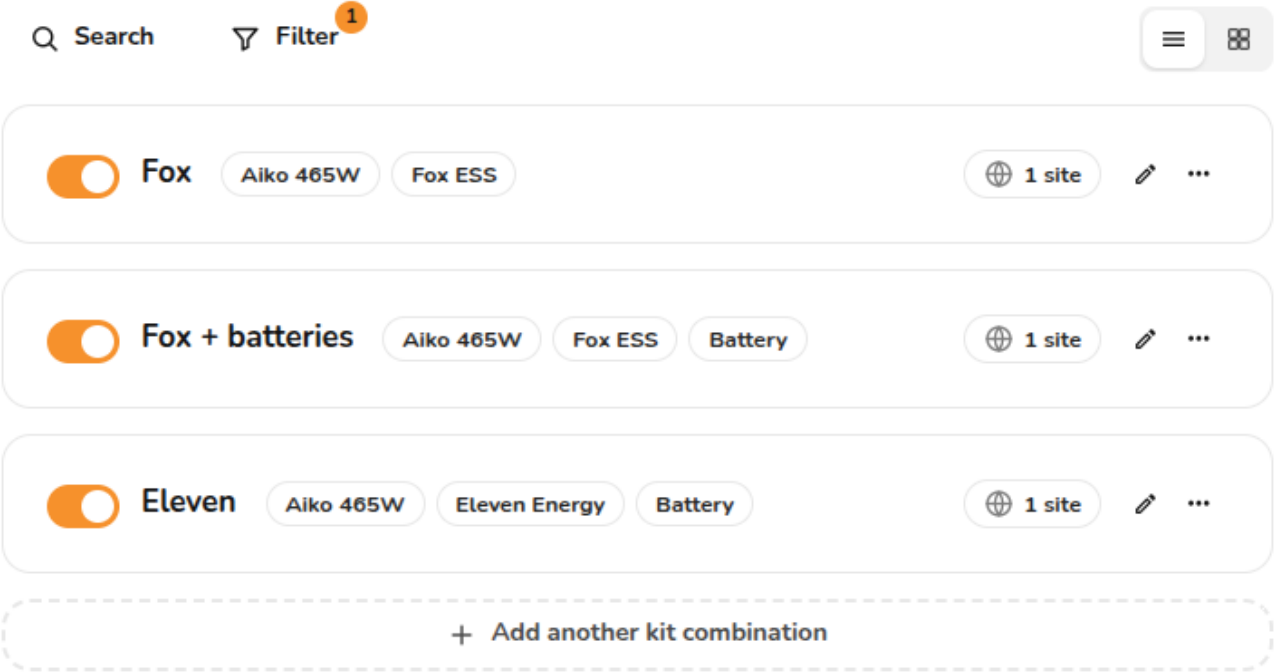

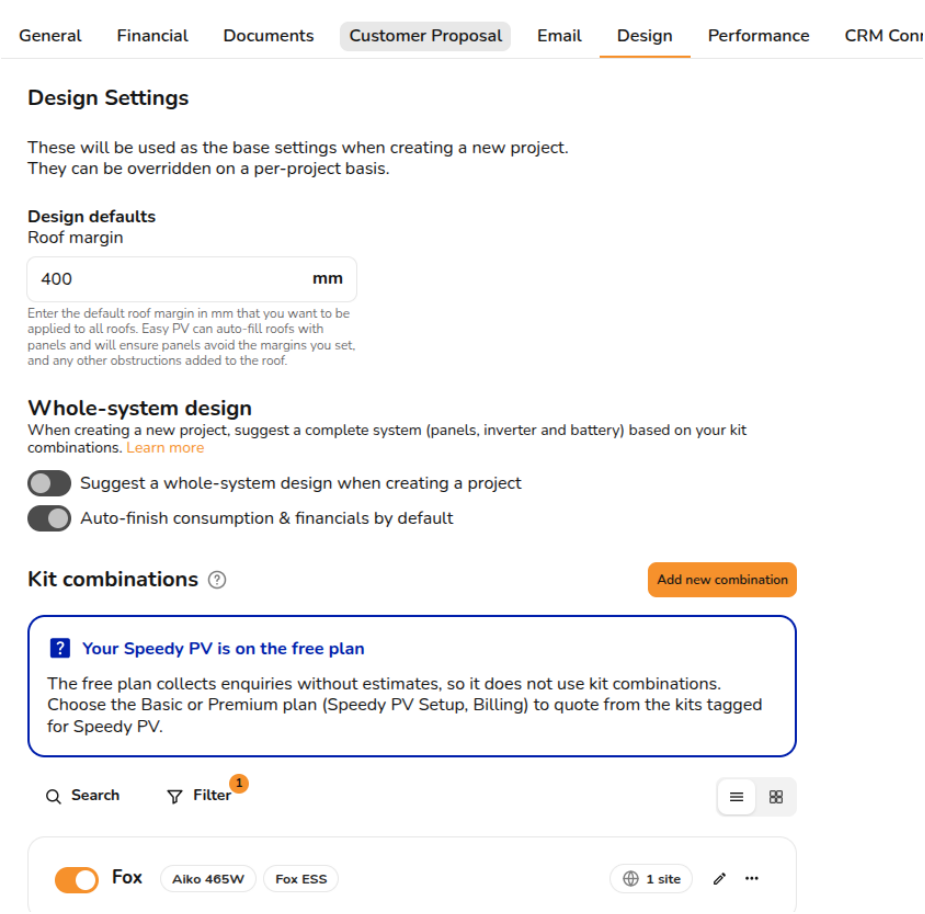

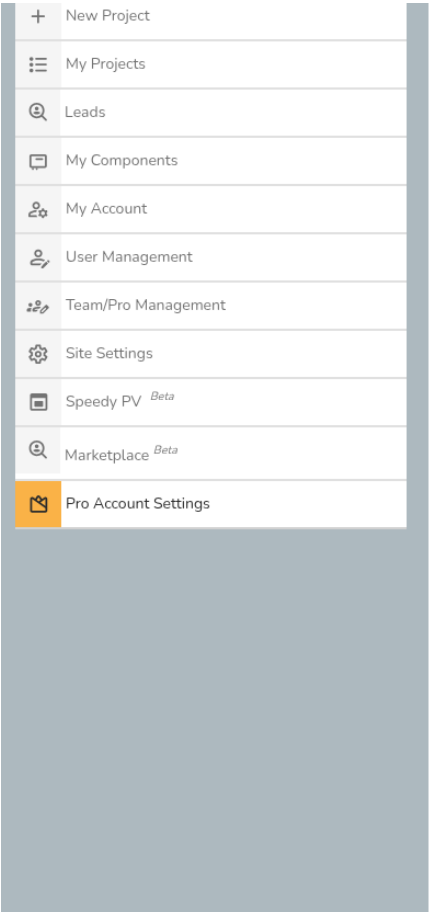

☐ **Only in the emailed estimate**
No prices on your Speedy PV. The customer sees the price of the system they choose in the estimate we email them when they ask for a quote.

☐ **Never**
No prices on your Speedy PV, nor in the emails to the customer or to you. You go through the price with them yourself.

Estimate configuration/ Kit combinations

The free plan collects enquiries without estimates, so it does not quote your kit combinations. On the Premium plan, your Speedy PV offers a homeowner one system for each kit combination. Switch this on to head each system with its kit combination's name, so a homeowner with a brand in mind can find it straight away. Names are shown exactly as they are written on your Kit Combinations page, so check they read well to a customer first.

You will need to set up your kit combinations under 'Pro Account Settings' > 'Design'

We recommend having a few combinations with and without batteries.

Terms

On the terms tab, read through the specific terms for Speedy PV and once you're happy, click I accept the terms of use.

Billing

On the billing tab you will need to select and accept the billing conditions.

Speedy PV V2 is available for free (enquiry form) but there is also basic and premium versions available for added detail and customisations

Speedy PV Setup

[Domains](#)[Contact](#)[Branding](#)[Emails](#)[Installation Area](#)[Pricing](#)[Roof Scanning](#)[Lead Capture](#)[Estimate Configuration](#)[Terms](#)[Billing](#)[Mo](#)

Plan

Speedy PV comes in three plans. Every plan has its own page on the Speedy PV website and a widget for your own website. You can change plan at any time; a change applies from the next month.

☒ **Free**
A simple enquiry form: the customer finds their address, confirms the outline of their property and tells you whether they want a battery and how much electricity they use. No estimates are shown. No charge.

☐ **Basic: £5 per lead**
Instant estimates from two of your kit combinations: the first one with a battery and the first one without, in the order your Kit Combinations page lists them. The customer sees one system of each, with prices. Customers can switch panels on and off on their roof when both kits use the same panel and mounting.

☐ **Premium: £100 / month plus £5 per lead**
Everything in Basic, plus every kit combination you tag for Speedy PV, several systems per customer with filters to compare them, your own web address (for example quote.yourcompany.co.uk) and the option to show prices only once a customer has left their details.
Not enabled for your team yet. Premium is switched on by Easy PV; contact help@easy-pv.co.uk to ask about it.

☒ I accept the Speedy PV billing conditions for the plan I have chosen.

Test page

Once the previous sections have been completed, you can play around with a test page. This has the option of testing with the desktop or mobile version.

Go Live

On the 'Go Live' tab, you will be able to see the following checklist:

Checklist

- ✓ Domain entered
- ✓ Contact details entered
- ✓ SMTP credentials entered
- ✓ Automatic pricing has been set up
- ✓ Panel selected
- ✓ Terms accepted
- ✓ Billing plan accepted

If any required sections are not completed, go back and fix any errors. Once all required fields are checked and you are happy with everything, you can then embed the tool into your website by following the instructions in this article: [Embedding Speedy PV into your Website](#).

We also have a new WordPress PlugIn located on the 'Preview' page.

Using WordPress?

You do not have to paste the tags above. Our WordPress plugin adds the widget and the address finder as a block, a shortcode, and an Elementor or WPBakery element, and it keeps itself up to date through WordPress like any other plugin.

[Get the WordPress plugin](#)

If your website sends a Content-Security-Policy

Most websites do not, and then there is nothing to do. If yours does, it has to allow Speedy PV:

- `script-src https://speedy-pv.co.uk` for the tags above, and for the roof drawer the widget loads when your customer reaches their roof

Once that's all done, you can then start using the tool in your website! If you have any questions, please contact our support team at help@easy-pv.co.uk.
