

New in February 2026

Updates

- Inverter task: battery range expanded to allow more than 10 batteries on each inverter.
- Row spacing now used for Solarport mounting in panels task when adding panels with arrow keys.
- Changes to proposal message when battery optimisation isn't completed or enabled. This remains an optional feature.
- Magic mode roof scanning now enabled for [medium resolution aerial imagery](#).

Fixes

- Fixed panel rendering issues for large 3D projects.
- Correction to AC isolator current calculation when using microinverters.
- Fix for overview 'Buy Now' link when using certain custom components.
- Fixed east west systems when the pitch of the panels was changed after completing performance task.

Revision #4
