

New in September 2025

We're excited to introduce several powerful updates to Easy PV that enhance financial modelling, battery management, and customer proposals.

- You can now configure flexible **payment options and financing** for your projects
- Model the financial benefits of **charging batteries from grid** or discharging batteries at peak times

Please note that these features are currently in BETA - please contact our [support team](#) if you encounter any issues.

Manage payment and finance options

You can now configure flexible payment options for your projects and make it easier than ever for your customers to move forward with their install.

- **Pay-in-full options** - Include deposits and stage payments tied to specific project milestones.
- **Finance/loan options** - Add details of financing plans available to your customers.

Once set up, choose which options to include in your projects via the Financial Task. These will appear in the customer proposal, complete with tailored cashflow and payback pages.

Refer to the guides on the **Easy PV help portal** to find out how to [configure payment and finance options via your account preferences](#) and how to [enable payment options for your projects](#).

Battery management: charge from grid/discharge to grid

Model the financial benefits of smart battery management for reduced payback periods and improved return on investment for your customers.

- **Charge from grid** during off-peak hours (e.g. overnight)
- **Discharge to grid** during peak hours for higher export rates

Set charge/discharge times in the **Consumption Task**, and Easy PV will forecast annual energy flows and financial returns. The financial benefits of battery management will also be included in financial projections in the **Financial Task** and reflected in the **Customer Proposal**.

Refer to the guides on the **Easy PV help portal** to find out how to [configure Battery Management for your projects](#)

Customer Proposal report enhancements

To support these new features, we've updated the Customer Proposal with new pages and other enhancements:

- **Financial Overview Page** - Summarizes key financial benefits, including battery grid interactions.
- **Order Form Page** - Displays available payment options and supports e-signing (Pro users only).
- **Cashflow Pages** - One for each payment option, showing:
 - Payment type
 - Expected payback period
 - Lifetime cost/benefit projections

Note: The order of some proposal pages has changed for an improved information flow.

We're excited to see how these new features help you deliver smarter, more flexible solar solutions. As always, your feedback helps shape what comes next - so don't hesitate to reach out.

Revision #11
